Dear Valued Customers & Eyewear Community,

The below referenced information is being provided in an effort to assist our employees, sales representatives & customers with the cleaning & handling of WestGroupe frames.

How to Sanitize Your Eyewear

Recommended Methods

1. **Soap & Water**
   - We recommend cleaning all frames with anti-bacterial, lotion-free soap or dishwashing liquid in lukewarm water.

2. **Hydrogen Peroxide Wipes or 3% Hydrogen Peroxide Solution**
   - If hydrogen peroxide wipes are not available, a 50-50 mix of 3% hydrogen peroxide & water solution in a spray bottle can be used to clean the frames with a cleaning cloth.
   - Hydrogen peroxide wipes & solutions contain different ingredients from the regular disinfectant wipes & solutions. DO NOT use regular disinfectant wipes or solutions, as these will damage the frames.

3. **UVC Chamber/Box: 200nm - 280nm of ultraviolet rays**
   - Follow the recommended guidelines of your UVC chamber/box.

Process for Cleaning with Hydrogen Peroxide

- Do not touch your mouth, nose or eyes during the cleaning process.
- Recommended to wear latex or vinyl gloves before starting the process & when touching the product.
- Use your gloved hands to clean every part of the frame with a hydrogen peroxide wipe or spray the 3% hydrogen peroxide solution onto a regular cleaning cloth.
- After cleaning the frames, dispose of the gloves & wipes. Do not reuse the cleaning cloth before machine washing it first.
- Wash your hands for 20 seconds or use an hand sanitizer after disposing the gloves.
- Clean & sanitize all frames after each use.

Please continue to take care of yourself and each other.

Stay safe.
